TECHNICAL SKILLS

FRONTEND
JavaScript, TypeScript, React, Next.js, Redux, Zustand, Vite, Webpack, PWA

MOBILE
React Native, Expo, react-native-web

3D & GAMES
Three.js, React Three Fiber, WebGL, GLSL, Phaser, PixiJS, Blender

BACKEND & REAL-TIME
Node.js, Express, MongoDB, WebSocket, Centrifuge

AI
AI-assisted development (coding agents), LLM integration, OpenAI API

DEVOPS & QUALITY
GitHub Actions, Linux/VPS, Firebase, Jest, Cypress, Git

LANGUAGES

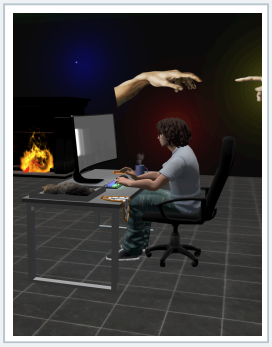

Persian - Native
English - Proficient

AVAILABILITY

Available immediately
Remote | B2B | Contract

INTERESTS

Game development, shaders & creative coding, algorithms & physics, open source

INTERACTIVE WEBGL PORTFOLIO

PROFILE

Senior engineer with **10+ years** of professional web experience, specializing in **interactive 3D/WebGL applications, real-time multiplayer games, and cross-platform products**. Most recently shipped Comma, a full-stack social platform (web + Android), solo from concept to production using AI coding agents. Strong in React, Three.js, React Three Fiber, and GLSL, with a focus on rendering performance, clean architecture, and fast, end-to-end product delivery.

EXPERIENCE

Founder & Full-Stack Engineer | Comma

MAY 2026 - PRESENT | REMOTE

Bilingual (EN/FA) social platform for cataloging films, series, books, and music, getting AI recommendations, and finding people with similar taste.

comma.cam | Web app | **Android (Cafe Bazaar)**

- Built and shipped the entire product **solo with AI coding agents**, acting as product owner, architect, and reviewer: defining features, directing implementation, and testing every release (1,100+ commits).
- Evolved the product from a Telegram bot (Muze) into a standalone cross-platform app and API in about four months.
- Delivered Android and web from a **single TypeScript codebase** (React Native, Expo, react-native-web), including an installable, offline-capable PWA and over-the-air updates.
- Designed a distinctive **hand-drawn "paper notebook" interface** in SVG, with full English/Persian (LTR/RTL) support and light/dark themes.
- Shipped a **Node.js + MongoDB backend** with real-time discussion rooms, voice messages, friends, privacy controls, Google Sign-In, and in-app purchases.
- Built AI features: **LLM-powered recommendations and taste labels**, validated against external catalogs (Wikipedia, Open Library, iTunes) and protected against prompt injection.
- Run production end to end: VPS deployment, GitHub Actions CI with automated tests, backups, and push notifications.

Web Game Developer | Bitazza

AUG 2024 - MAR 2026 | THAILAND, REMOTE

Browser-based games and interactive 3D experiences for a crypto-wallet platform.

Product: Freedom World | Google Play | App Store

- Built a **real-time cooperative multiplayer card game** using Centrifuge for event streaming and state synchronization, with React Three Fiber powering the interactive interface.
- **Optimized frame rate, memory usage**, rendering, and update cycles for mobile in-app browsers across a wide range of devices.
- Developed a **3D planet ownership and customization system** with efficient texture and asset handling.
- Created **custom shader-based animations** and visual effects using WebGL and GLSL.

Senior Frontend Engineer | PDN Co

SEP 2019 - AUG 2024 | TEHRAN

Frontend architecture and development of very large-scale banking applications.

- Built and maintained frontends for **large-scale banking products**, where reliability, security, and performance were critical.
- Designed a **modular micro-frontend architecture** for the team's latest banking platform, so multiple teams could develop and integrate independent applications as the product scaled.
- Built **data-intensive dashboards** with complex state management and optimized data-visualization workflows.
- Profiled and optimized **rendering performance** throughout the product lifecycle, improving responsiveness and user experience.

Senior Frontend Developer | Carpino

MAR 2019 - SEP 2019 | TEHRAN

Large-scale online ride-hailing platform.

- Developed **core mapping features** and **WebSocket-based real-time updates** for live ride tracking and the passenger experience.

Earlier Experience (before 2019) — Frontend / Web Developer at Rayaneh Sazan, Part App, and other teams, building websites and web applications.
